REAL KINETIC

YOUR POTENTIAL REALIZED

```
// Enum
```

```
var DaysEnum = Object.freeze({monday:1,  
                                "tuesday":2,  
                                "wednesday":3  
                                });
```

```
DaysEnum.monday = 33;
```

```
// Throws an error in strict mode
```

```
console.log(DaysEnum.tuesday);
```

```
// expected output: 2
```

But not quite. It usually takes quite a bit of code to make a proper Sum type in other languages

```
// Enum  
var DaysEnum = Object.freeze({ "monday": 1,  
                                "tuesday": 2,  
                                "wednesday": 3  
                                });
```

```
DaysEnum.monday = 33;  
// Throws an error in strict mode
```

```
console.log(DaysEnum.tuesday);  
// expected output: 2
```
