There are multiple values named `twentyFour` in this let-expression.

Search through this let-expression, find all the values named `twentyFour`, and give each of them a unique name.

```elm
good : Int
good =
    let
        twentyFour =
            3 * 8

        newTwentyFour =
            20 + 4
    in
        newTwentyFour
-- This will compile.
```

There are multiple values named
`twentyFour` in this let-expression.

Search through this let-expression, find
all the values named `twentyFour`, and
