```elm
withDefault : a -> Maybe a -> a
withDefault default maybe =
    case maybe of
        Just value -> value
        Nothing -> default

withDefault 10 (Just 15) -- 15
withDefault 10 (Nothing) -- 10
withDefault "foo" (Just "bar") -- "bar"
withDefault "foo" (Nothing) -- "foo"
```

Thankfully there are functions in the maybe package to help us out
